## <u>CLAIMS</u>

- 1. A purified and isolated DNA having a sequence selected from the group consisting of SEQ ID NO:1 through SEQ ID NO:51.
- 2. A purified and isolated protein encoded by a gene whose sequence includes a sequence selected from the group consisting of SEQ ID NO:52 through SEQ ID NO:102.
- $$/^{\circ}$$  3. A purified and isolated DNA having a sequence selected from the group consisting of SEQ ID NO: 103 through SEQ ID NO: 154.

4. A purified and isolated protein encoded by a gene sequence selected from the group consisting of SEQ ID NO: 155 through SEQ ID NO: 206.

- 5. A purified and isolated protein having an amino acid sequence selected from the group consisting of SEQ ID NO:52 through SEQ ID NO:102 and SEQ ID NO:155 through SEQ ID NO:206.
- 6. A method for the recombinant DNA-directed synthesis of a protein, said method comprising:

culturing a transformed or transfected host organism containing a DNA sequence capable of directing the host organism to produce said protein under conditions such that the protein is produced, said protein exhibiting substantial homology to a protein comprising the amino acid sequence selected from the group consisting of SEQ ID NO:52 through SEQ ID NO:102 or SEQ ID NO:155 through SEQ ID NO:206.

30

25

20

- 7. The method of claim 6, wherein the host organism is transfected with a recombinant eukaryotic expression vector.
- 8. The method of claim 7, wherein the hostorganism is a eukaryotic cell.

9. A recombinant expression vector comprising a DNA sequence selected from the group consisting of SEQ ID NO:1 through SEQ ID NO:51 and SEQ ID NO:103 through SEQ ID NO:154.

- 10. A host organism transformed or transfected with a recombinant expression vector according to claim 9.
- 15 11. A method of detecting antibodies against HCV, said method comprising:
  - (a) contacting a biological sample with at least one protein of claim 5 to form an immune complex with the antibodies; and
  - (b) detecting the presence of the immune complex.
  - 12. The method of claim 11 wherein the biological sample is selected from the group consisting of serum, saliva or lymphocytes or other mononuclear cells.
    - 13. The method of claim 11, wherein the recombinant protein is bound to a solid support.
- 30 14. The method of claim 11, wherein the immune complex is detected using a labeled antibody.
- one protein comprising an amino acid sequence selected from the group consisting of: SEQ ID NO:52 through SEQ ID NO:102

20

and SEQ ID NO:155 through SEQ ID NO:206.

16. A composition comprising at least one recombinant protein of claim 5 and an excipient, diluent or carrier.

5 July 5

17. A composition comprising an expression vector capable of directing host organism synthesis of a protein having an amino acid sequence selected from the group consisting of SEQ ID NO: 52 through SEQ ID NO: 102 and SEQ ID NO: 155 through SEQ ID NO: 206.

10

18. A method of preventing hepatitis C infection, comprising administering the composition of claim 16 or 17 to a mammal in an effective amount to stimulate the production of protective antibody.

15

19. A vaccine for immunizing a mammal against hepatitis C infection, comprising at least one protein according to claim 5 in a pharmacologically acceptable carrier.

20

25

30

- 20. A vaccine for immunizing a mammal against hepatitis C infection, said vaccine comprising an expression vector capable of directing host organism synthesis of a protein having an amino acid sequence selected from the group consisting of SEQ ID NO:52 SEQ ID NO:102 and SEQ ID NO:155 SEQ ID NO:206.
- 21. A method for detecting the presence of the hepatitis C virus via a reverse transcription-polymerase chain reaction, said method comprising amplifying an HCV reverse transcription product by polymerase chain reaction using universal primers.
- 22. The method of claim 21, wherein said universal primers are deduced from universally conserved

nucleotide domains found in SEQ ID NO: 1 through SEQ ID NO: 51, in SEQ ID NO: 103 through SEQ ID NO: 154, or in consensus sequences shown in Figures 1A-H and 6A-K.

5 universal primers, wherein said primers have nucleic acid sequences derived from universally conserved nucleotide domains found in SEQ ID NO:1 through SEQ ID NO:51, in SEQ ID NO:103 through SEQ ID NO:154 and in consensus sequences showing Figures 1A-H and 6A-K.

10

24. A diagnostic kit for use in detecting the presence of hepatitis C virus in a biological sample, said kit comprising at least two universal primers according to claim 22.

15

20

- // 25. A diagnostic kit for use in detecting the presence of hepatitis C virus is a biological sample, said kit comprising at least one nucleic acid sequence selected from the group consisting of SEQ ID No:1-51 or SEQ ID No:103-154.
- 26. A method for determining the genotype of a hepatitis C virus, said method comprising:

25

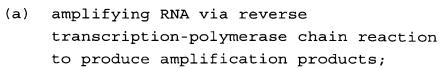

amplifying reverse transcription products of RNA via polymerase chain reaction using genotype-specific amplification primers deduced from genotype-specific nucleotide domains found in SEQ ID NO:1 through SEQ ID NO:51, in SEQ ID NO:103 through SEQ ID NO:154, or in consensus sequences shown in Figures 1A-H and 6A-K.

30

35

27. A method for determining the genotype of a hepatitis C virus, said method comprising:

372577\_1

- (b) contacting said products with at least one sequence shown in SEQ ID NO:1 through SEQ ID NO:51 and SEQ ID NO:103 through SEQ ID NO:154; and
- (c) detecting complexes of said product which bind to said nucleic acid sequence.
- 28. A method for determining the genotype of a hepatitis C virus, said method comprising:
  - (a) amplifying RNA via reverse transcription-polymerase chain reaction to produce amplification products;
  - (b) contacting said products with at least one genotype-specific oligonucleotide; and
  - (c) detecting complexes of said products which bind to said oligonucleotide(s).
- 29. The method of claims 27 or 28, wherein said amplification of step (a) uses universal primers deduced from universally conserved nucleotide domains found in SEQ ID NO:1 through SEQ ID NO:51, in SEQ ID NO:103 through SEQ ID NO:154, or in consensus sequences shown in Figures 1A-H and 6A-K.
- 30. The method of claim 28, wherein said genotype-specific oligonucleotide of step (b) is a nucleic acid sequence deduced from genotype-specific nucleotide domains found in SEQ ID NO:1 through SEQ ID NO:51 and SEQ ID NO:103 through SEQ ID NO:154, or in consensus sequences shown in Figures 1A-H and 6A-K.

35

10

15

20

- 31. Substantially isolated and purified genotype-specific oligonucleotides, wherein said oligonucleotides have nucleic acid sequences deduced from genotype-specific nucleotide domains found in SEQ ID NO:1 through SEQ ID NO:51, in SEQ ID NO:103 through SEQ ID NO:154, or in consensus sequences shown in Figures 1A-H and 6A-K.
  - 32. Substantially purified and isolated genotype-specific peptides having amino acid sequences deduced from a genotype-specific amino acid domains located in SEQ ID NO:52 through SEQ ID NO:102, in SEQ ID NO:155 through SEQ ID NO:206, or in consensus sequences shown in Figures 2A-H and 7A-K.
  - 33. A method of detecting antibodies specific for a single genotype of HCV, said method comprising:
    - (a) contacting a biological sample with at least one peptide of claim 32 to form an immune complex with the antibodies, and
    - (b) detecting the presence of the immune complex.
- 34. The method of claim 33, wherein the biological sample is selected from the group consisting of serum, saliva or lymphocytes or other mononuclear cells.
  - 35. The method of claim 33, wherein said peptide is bound to a solid support.
  - 36. The method of claim 33, wherein the immune complex is detected using a labelled antibody or antigen.
  - 37. A kit for use in detecting antibodies specific for a single genotype of HCV, said kit comprising:

Sult

35

at least one peptide selected from the genotype-specific peptides of claim 32.

July 305 5

15

25

38. Substantially purified and isolated universal peptides having amino acid sequences deduced from universally conserved amino acid domains found in SEQ ID NO:52 through SEQ ID NO:102, in SEQ ID NO:155 through SEQ ID NO:206, or in consensus sequences shown in Figures 2A-H and 7A-K.

- 39. A method of detecting antibodies against all genotypes of HCV, said method comprising:
  - (a) contacting a biological sample with at least one peptide of claim 38 to form an immune complex with the antibodies, and
  - (b) detecting the presence of the immune complex.
- 40. The method of claim 39, wherein the biological sample is selected from the group consisting of serum, saliva or lymphocytes or other mononuclear cells.
  - 41. The method of claim 39, wherein said peptide is bound to a solid support.
  - 42. The method of claim 39, wherein the immune complex is detected using a labelled antibody or antigen.
- 43. A composition comprising at least one peptide of claim 32 and an excipient, diluent or carrier.
  - 44. A composition comprising at least one peptide of claim 38 and an excipient, diluent or carrier.
- 35  $^{45}$ . A method of preventing hepatitis C  $^{372577}$ 1

10

15

- infection, comprising administering the composition of claims 43 or 44 to a mammal in an effective amount to stimulate production of a protective antibody.
- 46. A vaccine for immunizing a mammal against 5 hepatitis C infection, comprising at least one peptide according to claims 32 or 38 in a pharmaceutically acceptable carrier.
  - A composition comprising at least one expression vector capable of directing host organism synthesis of a genotype-specific peptide having amino acid sequence deduced from a genotype-specific amino acid domain located in SEQ ID NO:52 - SEQ ID NO:102, and SEQ ID NO:155 - SEQ ID NO:206, or in consensus sequences shown in figures 2A-H and 7A-K.
  - 48. A composition/comprising at least one expression vector capable of directing host organism synthesis of a universal/peptide having amino acid sequence deduced from universally conserved amino acid domains found in SEQ ID NO:52 - SEQ ID NO:102, and SEQ ID NO:155 - SEQ ID NO:206, or in consensus sequences shown in figures 2A-H and 7A-K.
- 49. A method of preventing hepatitis C 25 infection, comprising administering the composition of claims 47 or 48 to a mammal in an effective amount to stimulate production of a protective antibody.
- 50. A vaccine for immunizing a mammal against 30 hepatitis C infection, said vaccine comprising at least one expression vector capable of directing host organism synthesis of a geno-type specific peptide having amino acid sequence deduced from a geno type-specific amino acid domain located in SEQ ID NO:52 - SEQ ID NO:102, and SEO ID 35

NO:155 - SEQ ID NO:206, or in consensus sequences shown in figures 2A-H and 7A-K.

- 51. A vaccine for immunizing a mammal against hepatitis C infection, comprising at least one expression vector capable of directing host organism synthesis of a universal peptide having amino acid sequence deduced from universally conserved amino acid domain found in SEQ ID NO:52 SEQ ID NO:102, and SEQ ID NO:155 SEQ ID NO:206, or in consensus sequences shown in figures 2A-H and 7A-K.
- 52. Anti-HCV core antibodies having specific binding affinity for core protein of a single genotype of HCV.
- 53. Anti-HCV envelope 1 antibodies having specific binding affinity for envelope 1 protein of a single genotype of HCV.
- $^{\wedge}$  54. The antibodies of claims 52 or 53 wherein said antibodies are monoclonal antibodies.
  - 55. A method of detecting core protein specific for a single genotype of HCV, said method comprising:
    - (a) contacting a biological sample with at least one antibody of claim 52 to form an immune complex with said core protein, and
    - (b) detecting the presence of the immune complex.
  - 56. A method of detecting E1 protein specific for a single genotype of HCV, said method comprising:
    - (a) contacting a biological sample with at least one antibody of claim 53 to form an immune complex with said E1 protein;

35

30

25

5

and

- (b) detecting the presence of the immune complex.
- 57. The methods of claims 55 or 56, wherein the biological sample is selected from the group consisting of serum, saliva lymphocytes or other mononuclear cells and liver.
- 58. The method of claims 55 or 56, wherein said antibody is bound to a solid support.
  - 59. A method of detecting antibodies against all genotypes of HCV, said method comprising:
    - (a) contacting a biological sample with at least one universal peptide of claim 38 to form an immune complex with said antibodies; and
    - (b) detecting the presence of the immune complex.
